TITLE : LAMINATED SHEET FOR DISPLAY

ABSTRACT : PURPOSE: To obtain the sheet capable of almost completely preventing a dye on the surface of the articles after thermally bonding to various articles from depositing onto the marked ground surface and not impairing touch feeling by providing a barrier resin layer between a colored resin layer and a hot melt adhesive layer.

CONSTITUTION: This sheet is obtained by successively laminating a colored resin layer 2, a barrier resin layer 3 and a hot melt type adhesive layer 4 having a melting point lower than that of the colored resin layer 2 onto a light- transmitting film having heat resistance and the film 1 is releasable to the colored resin layer 2. Furthermore, preferably, the thickness of the layer 3 is 3-30 μ m and total thickness of these layers 2 to 4 is 80-180 μ m and the resin used for the layer 3 is an ethylene-vinyl-based copolymer resin and the resin contains 5-40wt.% of an isocyanate-based, melamine-based or epoxy-based crosslinking agent, and a polyethylene terephthalate film is preferably used as the film 1 and a polyurethane layer are preferably used as the layer 2.
